

Context-free Parsing

Irene Font Peradejordi

The following context-free grammar G describes the structure of simple mathematical expressions.

$G = (V, \Sigma, R, S)$:

$V = \{E, \text{NUM}\}$

$\Sigma = \{ (,), +, -, *, /, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9 \}$

$R = \{$

$E \rightarrow (E),$

$E \rightarrow E + E,$

$E \rightarrow E - E,$

$E \rightarrow E * E,$

$E \rightarrow E / E,$

$E \rightarrow \text{NUM},$

$\text{NUM} \rightarrow 0,$

$\text{NUM} \rightarrow 1,$

$\text{NUM} \rightarrow 2,$

$\text{NUM} \rightarrow 3,$

$\text{NUM} \rightarrow 4,$

$\text{NUM} \rightarrow 5,$

$\text{NUM} \rightarrow 6,$

$\text{NUM} \rightarrow 7,$

$\text{NUM} \rightarrow 8,$

$\text{NUM} \rightarrow 9$

$\}$

$S = E$

1. Draw a parse tree of the sequence $(1 + 2) * 3$ according to the grammar.

2. Rewrite the grammar rules such that all rules conform to Chomsky Normal Form.

$\text{NUM} \rightarrow 0$
 $\text{NUM} \rightarrow 1$
 $\text{NUM} \rightarrow 2$
 $\text{NUM} \rightarrow 3$
 $\text{NUM} \rightarrow 4$
 $\text{NUM} \rightarrow 5$
 $\text{NUM} \rightarrow 6$
 $\text{NUM} \rightarrow 7$
 $\text{NUM} \rightarrow 8$
 $\text{NUM} \rightarrow 9$
 $\text{P1} \rightarrow ($
 $\text{P2} \rightarrow)$
 $\text{SUM} \rightarrow +$
 $\text{MUL} \rightarrow *$
 $\text{NEG} \rightarrow -$
 $\text{DIV} \rightarrow /$
 $\text{X1} \rightarrow \text{P1 NUM}$
 $\text{NUM} \rightarrow \text{X1 P2}$
 $\text{X2} \rightarrow \text{NUM SUM}$
 $\text{NUM} \rightarrow \text{X2 NUM}$
 $\text{X3} \rightarrow \text{NUM NEG}$
 $\text{NUM} \rightarrow \text{X3 NUM}$
 $\text{X4} \rightarrow \text{NUM MUL}$
 $\text{NUM} \rightarrow \text{X4 NUM}$
 $\text{X5} \rightarrow \text{NUM DIV}$
 $\text{NUM} \rightarrow \text{X5 NUM}$

3. Apply the Earley algorithm using the original grammar to the sequence "0 + 1 - 2" and write down the resulting chart as your answer.

0 0 1 + 2 1 3 - 4 2 5

Entry 0

∂	\rightarrow	$\cdot S$	$[0 - 0]$
S	\rightarrow	$\cdot E$	$[0 - 0]$

E	→	· (E)	[0 – 0]
E	→	· E + E	[0 – 0]
E	→	· E - E	[0 – 0]
E	→	· E * E	[0 – 0]
E	→	· E / E	[0 – 0]
E	→	· NUM	[0 – 0]
NUM	→	· 0	[0 – 0]
NUM	→	· 1	[0 – 0]
NUM	→	· 2	[0 – 0]
NUM	→	· 3	[0 – 0]
NUM	→	· 4	[0 – 0]
NUM	→	· 5	[0 – 0]
NUM	→	· 6	[0 – 0]
NUM	→	· 7	[0 – 0]
NUM	→	· 8	[0 – 0]
NUM	→	· 9	[0 – 0]

Entry 1

NUM	→	0 ·	[0 – 1]
E	→	NUM ·	[0 – 1]
E	→	E · + E	[0 – 1]
E	→	E · - E	[0 – 1]
E	→	E · * E	[0 – 1]
E	→	E · / E	[0 – 1]
S	→	E ·	[0 – 1]
∂	→	S ·	[0 – 1]

Entry 2

E	→	E + · E	[0 – 2]
---	---	---------	---------

Entry 3

NUM	→	1 ·	[0 – 3]
E	→	NUM ·	[0 – 3]
E	→	E + E ·	[0 – 3]
E	→	E · - E	[0 – 3]
S	→	E ·	[0 – 3]
∂	→	S ·	[0 – 3]

Entry 4

E	→	E · - E	[0 – 4]
---	---	---------	---------

Entry 5

NUM	→	2 ·	[0 – 5]
E	→	NUM ·	[0 – 5]
E	→	E – E ·	[0 – 5]
S	→	E ·	[0 – 5]
∂	→	S ·	[0 – 5]

All complete states

NUM	→	0 ·	[0 – 1]
NUM	→	1 ·	[0 – 3]
E	→	E + E ·	[0 – 3]
NUM	→	2 ·	[0 – 5]
E	→	NUM ·	[0 – 5]
E	→	E – E ·	[0 – 5]
S	→	E ·	[0 – 5]
∂	→	S ·	[0 – 5]

4. Does the sequence you have parsed in question 3 have an ambiguous syntactic structure? How can you tell? Relate your answer to the information the chart provides you.

Yes, it is ambiguous because we can either solve the + first ($0 + 1$) with the rule $E \rightarrow E + E$ and then do the subtraction ($1 - 2$) with the rule $E \rightarrow E - E$, or do the subtraction first and then the addition.

We can see that it is ambiguous because we solve the rule $S \rightarrow E$ in three different stages. A non-ambiguous sentence would solve it maximum twice as we cannot have a tree with more than 2 branches.

[I am not completely sure about the “2 branches” reasoning. I know it is ambiguous – because you can create two different trees- but I don’t know how to identify it with the Earley parsing results. So, after the assignment is graded, I will send you an email asking is this make sense]
